

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in this application:

**Listing of Claims:**

Claim 1. (Currently amended) An apparatus comprising:

a housing defining a slot to receive one of a plurality of types of removable memory cards, wherein the slot includes a central region of at least a height and a width to receive an entire memory card selected from a set comprising at least three different types of memory cards of at least two different widths of a first type and outer regions of a second height that extend the central region to a width to receive a memory card of a second fourth type different from the first type; and

a plurality of electrically conductive contact areas arranged within the housing to provide electrical contact with the different types memory cards.

~~a first electrically conductive contact area disposed within the slot to contact the memory card of the first type; and~~

~~a second electrically conductive contact area disposed within the slot to contact the memory card of the second type.~~

Claim 2. (Original) The apparatus of claim 1, wherein at least a portion of each of the contact areas is disposed within the central region of the slot.

Claim 3. (Original) The apparatus of claim 1 further comprising a bias mechanism coupled to the housing to bias a memory card toward the contact areas.

Claim 4. (Original) The apparatus of claim 1, further comprising a bias mechanism coupled to the housing within the central region of the slot to bias memory cards toward a first side of the central region of the slot.

**Claim 5. (Previously amended)** The apparatus of claim 4, wherein the bias mechanism biases a memory card to move the memory card a distance of at least approximately 3.5 mm from a second side of the central region of the slot.

**Claim 6. (Original)** The apparatus of claim 1, further comprising an insertion stop within the central region of the slot to limit an insertion depth of a memory card of a predetermined width or greater.

**Claim 7. (Original)** The apparatus of claim 1, wherein the housing has dimensions substantially conforming to a size specification of a CompactFlash removable memory card.

**Claim 8. (Original)** The apparatus of claim 1, wherein the central region of the slot has a height of approximately 2.8 mm and a width of at least approximately 24 mm.

**Claim 9. (Original)** The apparatus of claim 1, wherein the outer regions of the slot extend the width of the slot to at least approximately 37 mm and have a height of at least approximately 0.76 mm.

**Claim 10. (Original)** The apparatus of claim 1, further comprising an electrically conductive interface for coupling to a memory card reader.

**Claim 11. (Original)** The apparatus of claim 1, further comprising an electrically conductive interface for coupling the apparatus to a connector for one of a Personal Computer Memory Card International Association (PCMCIA) bus, a Universal Serial Bus (USB) interface, a serial interface, a parallel interface, and a Small Computer System Interface (SCSI) interface.

**Claim 12. (Original)** The apparatus of claim 1, further comprising circuitry for converting signals received from the contact areas.

Claim 13. (Original) The apparatus of claim 1, wherein the circuitry converts the signals to conform to one of a Personal Computer Memory Card International Association (PCMCIA) bus, a Universal Serial Bus (USB), a serial interface, a parallel interface, and a small computer system interface (SCSI) interface.

Claim 14. (Original) The apparatus of claim 1, wherein the plurality of contact areas comprises:

- a first contact area for electrically coupling to a Smart Media memory card;
- a second contact area for electrically coupling to a Memory Stick memory card;
- a third contact area for electrically coupling to a Secure Digital memory card or a MultiMedia memory card.

Claim 15 (Withdrawn) The apparatus of claim 1, wherein the slot further includes first outer regions of the second height and second outer regions of a third height.

Claims 16-20 (Cancelled)

Claim 21. (Withdrawn) The apparatus of claim 16, wherein the central region has a first height, and wherein the slot further includes first outer regions of a second height and a second outer regions of a third height.

Claim 22. (Withdrawn) An apparatus comprising:  
a housing wherein the housing defines a slot having a central region of a height and a width to receive a first removable memory card, first outer regions defining heights and widths to receive a second removable memory card, and a second outer regions defining heights and widths to receive a third removable memory card; and  
a plurality of electrically conductive contact areas disposed within the housing.

Claim 23. (Withdrawn) The apparatus of claim 22, wherein the housing defines the slot having th central region of a height and a width to receive a MemoryStick removable

memory card, the first outer regions defining heights and widths to receive a MultiMedia removable memory card or a Secure Digital removable memory card , and the second outer region defining heights and widths to receive a SmartMedia removable memory card.

Claims 24-25 (Cancelled)
